

THOMAS R STRAYER
PRINCIPAL

“Good design isn’t easy... we just make it look that way.”

- Tom Strayer

As a principal of Quantum and registered architect, Tom is active in the day to day function of the firm as well as assuring the quality and reliability of design and code issues. He is also instrumental in solving problems for our clients through the analytical side of the design process. His forte is strategic planning and information management—the ability to affect the future by planning and organizing today.

Tom is continually looking for ways to improve efficiency by exploring “what if” scenarios and strategies, and ways to create a better way from a client-centered perspective. His strength and leadership in strategic programming and planning, as well as information management, have been instrumental in helping Fortune 500 companies such as Allison Transmission move at the speed of change. While working with Allison, Tom streamlined the management and organization of the office facilities by developing time-saving processes in space planning and move management.

Tom has worked with Ivy Tech Community College on various projects including a new facility in Logansport, Indiana. Based on their study of the new site, which has many positive and several negative attributes, Tom and the project team developed a master plan for the new campus. The team integrated their findings from initial user interviews and the programming process in order to identify the big-picture vision of the leadership and community. It takes a complete understanding of the vision to develop a successful solution.

Education

Univ. of Arkansas (1988)
Bach. Of Architecture
